Notice on Orders for Silicon Wafer Equipment

The V Technology Group has been working on the establishment of a silicon wafer and semiconductor equipment business since 2018. We are pleased to announce that we have received an order for 300mm silicon wafer equipment from a customer in China for approximately 1 billion yen.

Details

The market for wafer equipment in China is expected to grow further against the backdrop of the evolution of communication technologies such as 5G, changes in lifestyles in the Corona disaster, and support from the Chinese government aiming to increase the ratio of domestic production of semiconductors.

We have been making various efforts such as establishing Z-CSET, a joint venture company with local capital in 2018 to carefully understand customers' needs manufacturing silicon wafers, give shape to ideas that will become solutions, aim to launch a semiconductor equipment business quickly. In recent business negotiations, this equipment's high productivity was highly evaluated and led to the order.

With this order as a starting point, China's semiconductor equipment business will be launched on a full scale. We will widely promote this achievement to our wafer manufacturing customers in China and overseas, aiming to further expand the semiconductor equipment business. The order for this equipment is expected to have a negligible impact on the business results for the current fiscal year. It is expected to contribute to the business results for the fiscal year ending March 31, 2022.

As a leading company in semiconductor and display equipment, V Technology group is determined to contribute to society by creating the world's best innovations with great ambition and overflowing passion. We would like to ask for your continued generous support.
